Administrator User Guide

Admin Capabilities

- Create and manage staff user accounts
- Define and manage application types (e.g., BNR License, Commercial Bank License, Microfinance Institution License)
- Configure review workflows for each application type
- Define workflow states and transitions
- Assign staff users to workflow roles
- Configure document requirements for each license type
- Monitor all system activity through audit logs

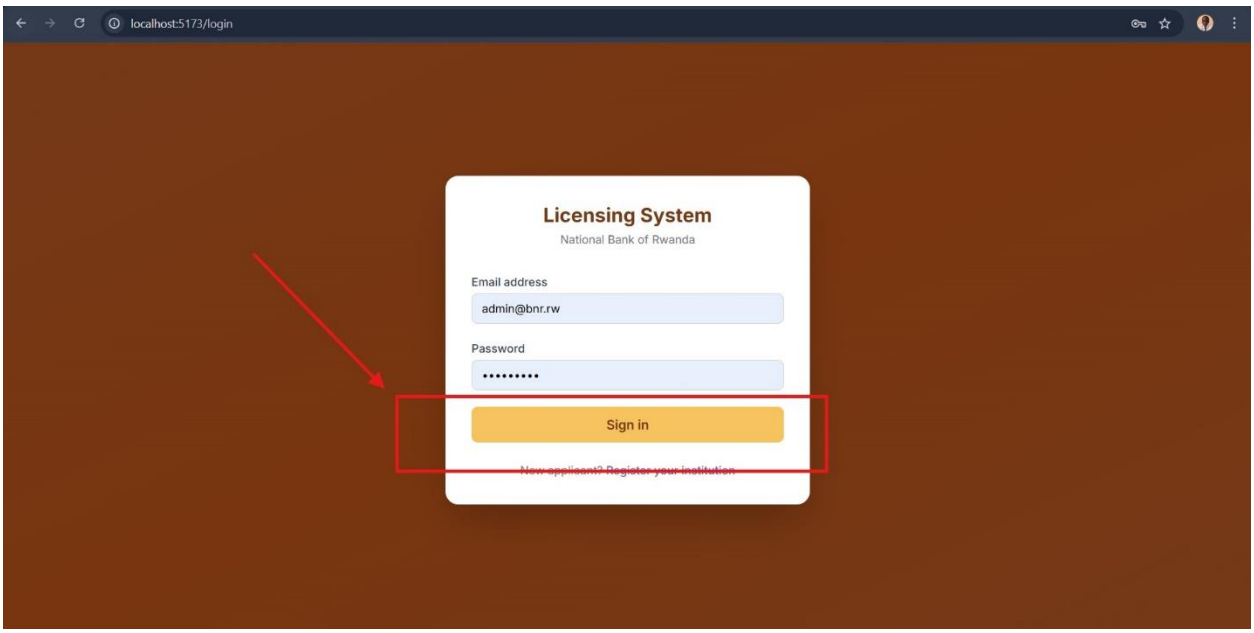
Logging In

To access the system as an administrator, navigate to the system login page in your web browser.

Login Steps

- Open your browser and navigate to the Licensing System URL (e.g., **localhost:5173/login**).
- Enter your **Email address** in the email field (e.g., admin@bnr.rw).
- Enter your **Password** in the password field.
- Click the **Sign In** button to log in.

Upon successful authentication, you will be redirected to the Admin Dashboard. Your name and role (ADMIN) are displayed at the bottom of the left sidebar.

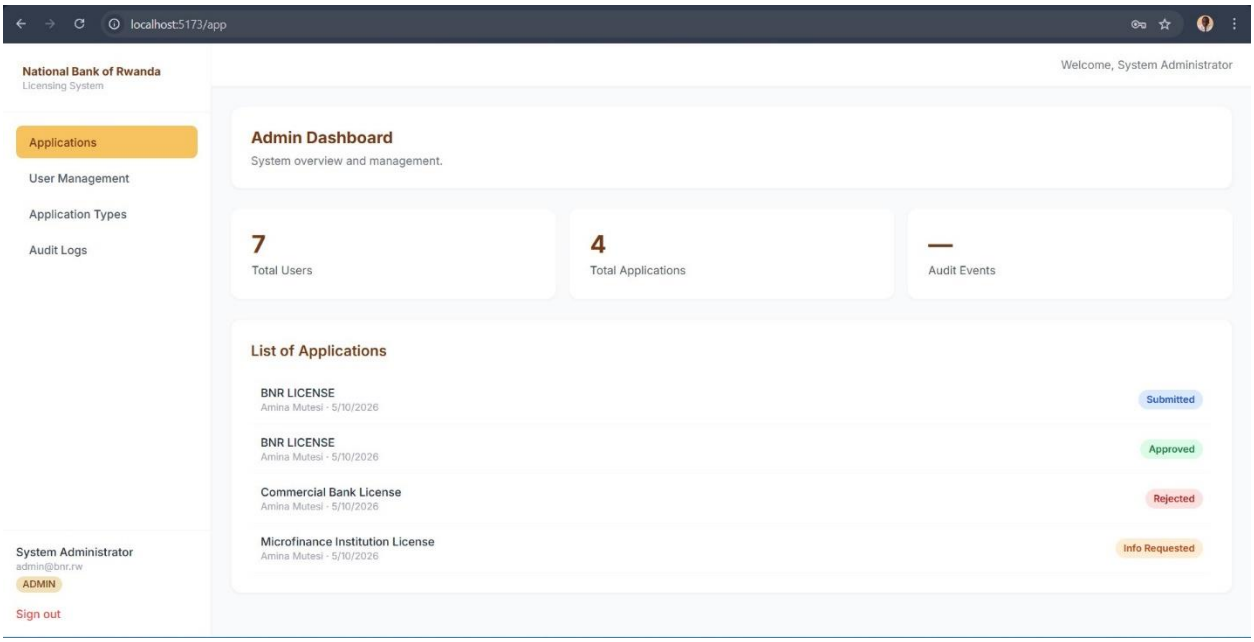


Admin Dashboard

After logging in, the Admin Dashboard is the first screen you will see. It provides a high-level overview of system activity and quick access to all administrative sections.

Below the summary statistics, the dashboard displays a List of Applications showing recent submissions. Each entry includes:

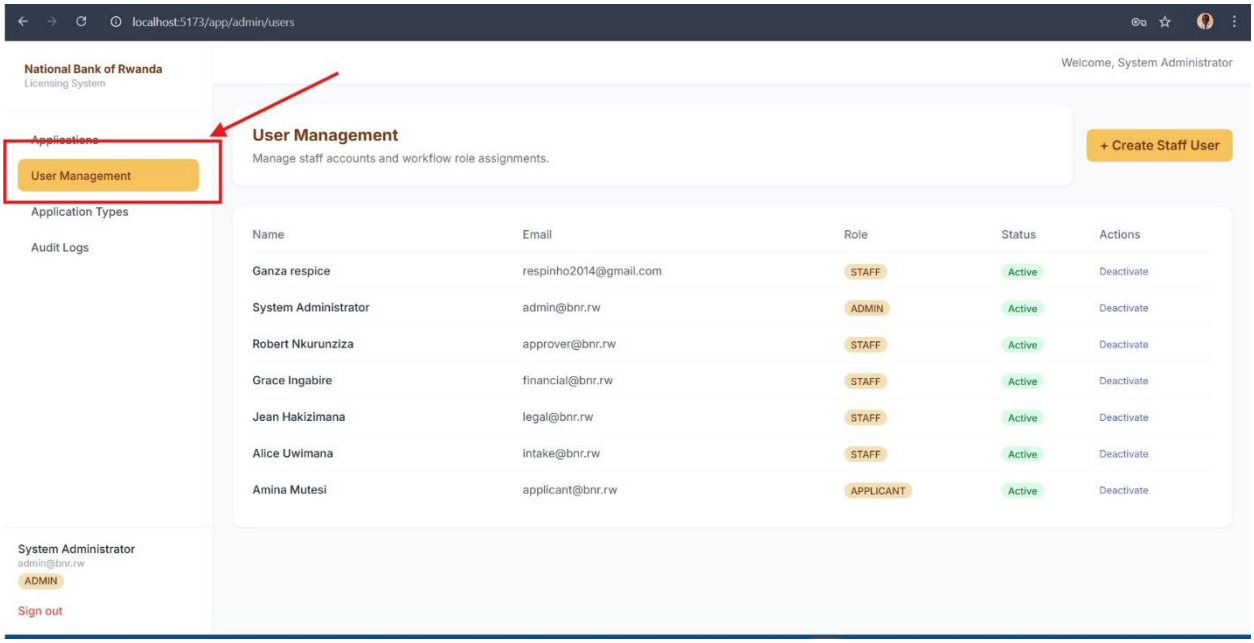
- Application name (e.g., BNR LICENSE, Commercial Bank License)
- Applicant name and submission date
- Current status badge (Submitted, Approved, Rejected, Info Requested)



User Management

The User Management section allows administrators to view all registered users, create new staff accounts, assign roles, and activate or deactivate accounts.

To navigate to User Management, click User Management in the left sidebar. The page header will read "User Management – Manage staff accounts and workflow role assignments."

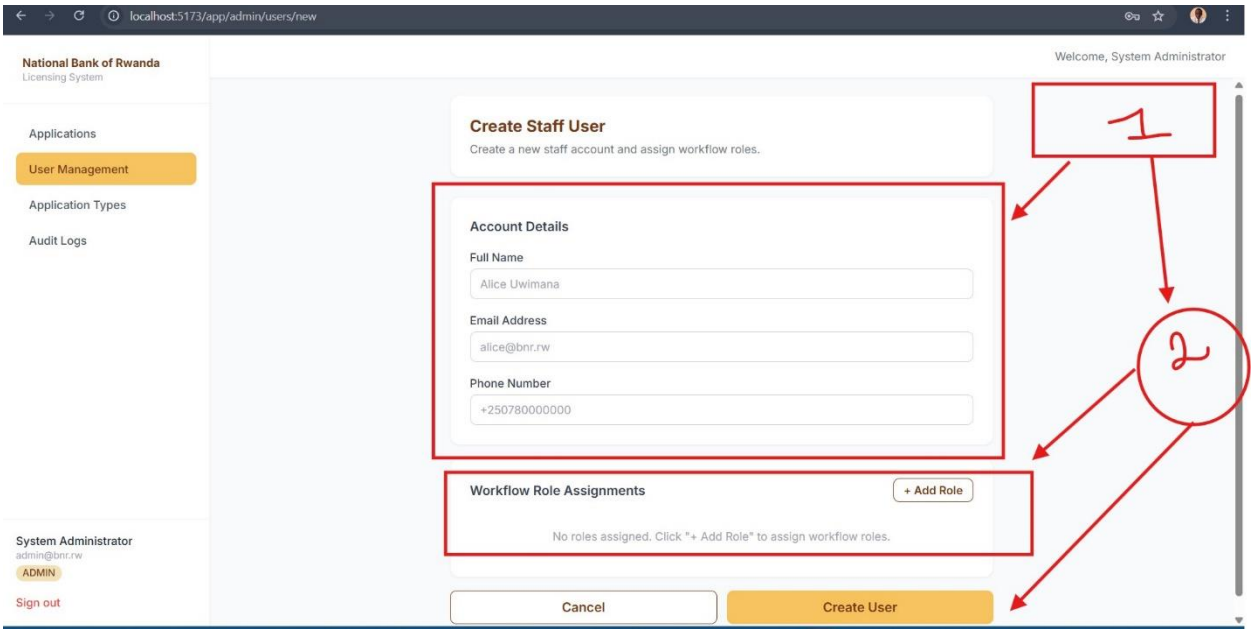


Example users visible in the system:

Name	Email	Role
System Administrator	admin@bnr.rw	ADMIN
Robert Nkurunziza	approver@bnr.rw	STAFF
Grace Ingabire	financial@bnr.rw	STAFF
Jean Hakizimana	legal@bnr.rw	STAFF
Alice Uwimana	intake@bnr.rw	STAFF
Amina Mutesi	applicant@bnr.rw	APPLICANT

Creating a Staff User

To create a new staff account, click the + Create Staff User button in the top-right corner of the User Management page. A form will open with two sections:



Section 1: Account Details

- Full Name – Enter the staff member's full name.
- Email Address – Enter a valid email address (this will be used for login).
- Phone Number – Enter the staff member's phone number in international format (e.g., +250780000000).

Section 2: Workflow Role Assignments

- This section displays any workflow roles assigned to the user.
- Click the + Add Role button to assign one or more workflow roles to the user.
- If no roles are assigned yet, the message "No roles assigned. Click '+ Add Role' to assign workflow roles" is shown.

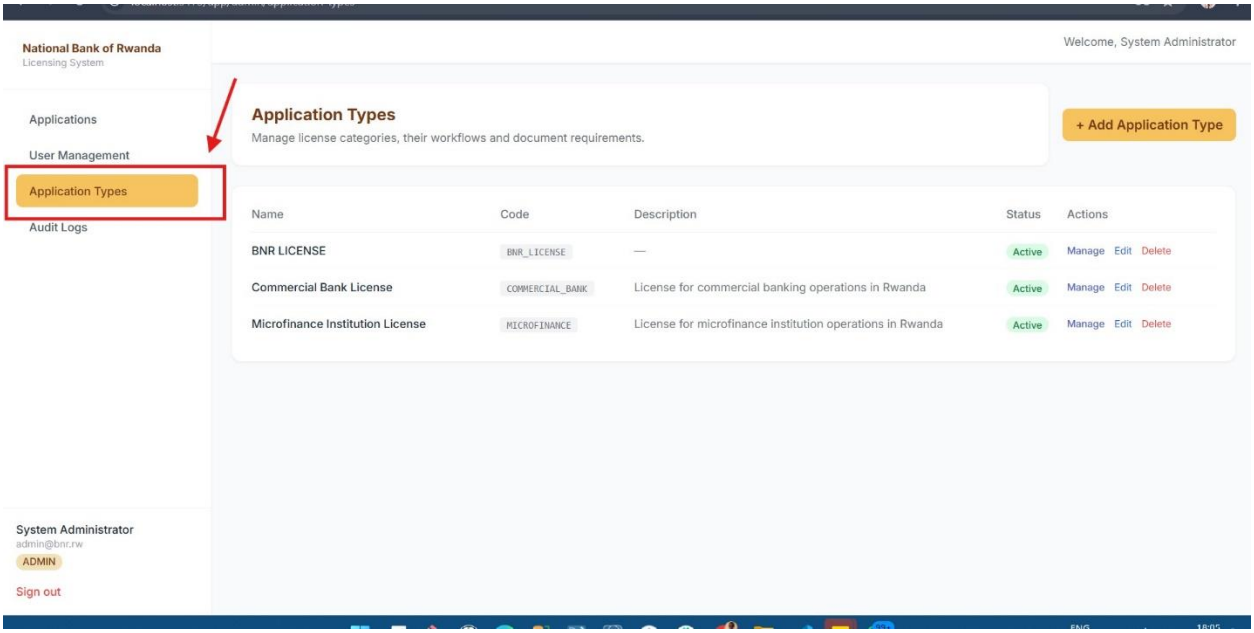
After filling in the required fields, click the Create User button to save. Click Cancel to discard the form.

Note: Workflow roles must be configured in the Application Types section before they can be assigned here.

Application Types

Application Types define the different categories of licenses that applicants can apply for. Each application type has its own workflow, document requirements, and assigned staff roles.

To navigate to Application Types, click Application Types in the left sidebar.



Viewing Application Types

The Application Types page lists all currently configured license categories in a table with the following columns:

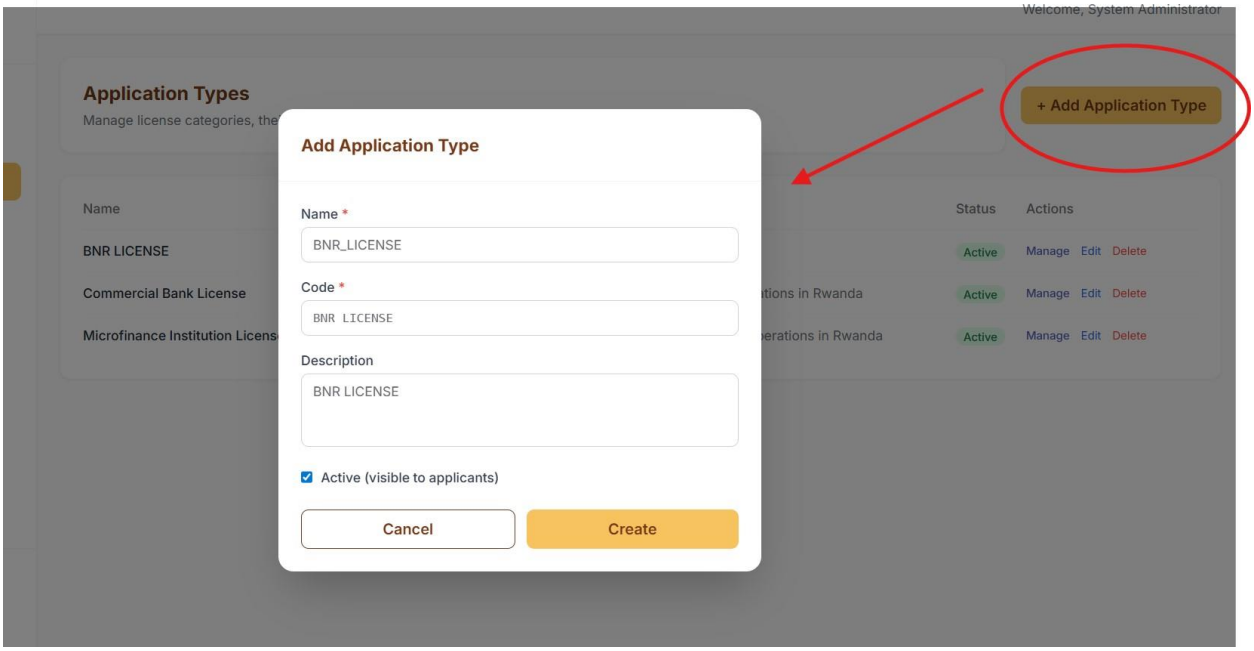
Column	Description
Name	The display name of the license type (e.g., BNR LICENSE, Commercial Bank License).
Code	A unique system code identifying the type (e.g., BNR_LICENSE, COMMERCIAL_BANK).
Description	A short description of the license category.
Status	Active or Inactive (Active types are visible to applicants).
Actions	Manage, Edit, and Delete links for each type.

Pre-configured application types in the system:

Name	Code	Description
Commercial Bank License	COMMERCIAL_BANK	License for commercial banking operations in Rwanda.
Microfinance Institution License	MICROFINANCE	License for microfinance institution operations in Rwanda.

Adding a New Application Type

To create a new license category, click the + Add Application Type button in the top-right corner. A modal dialog will appear with the following fields:



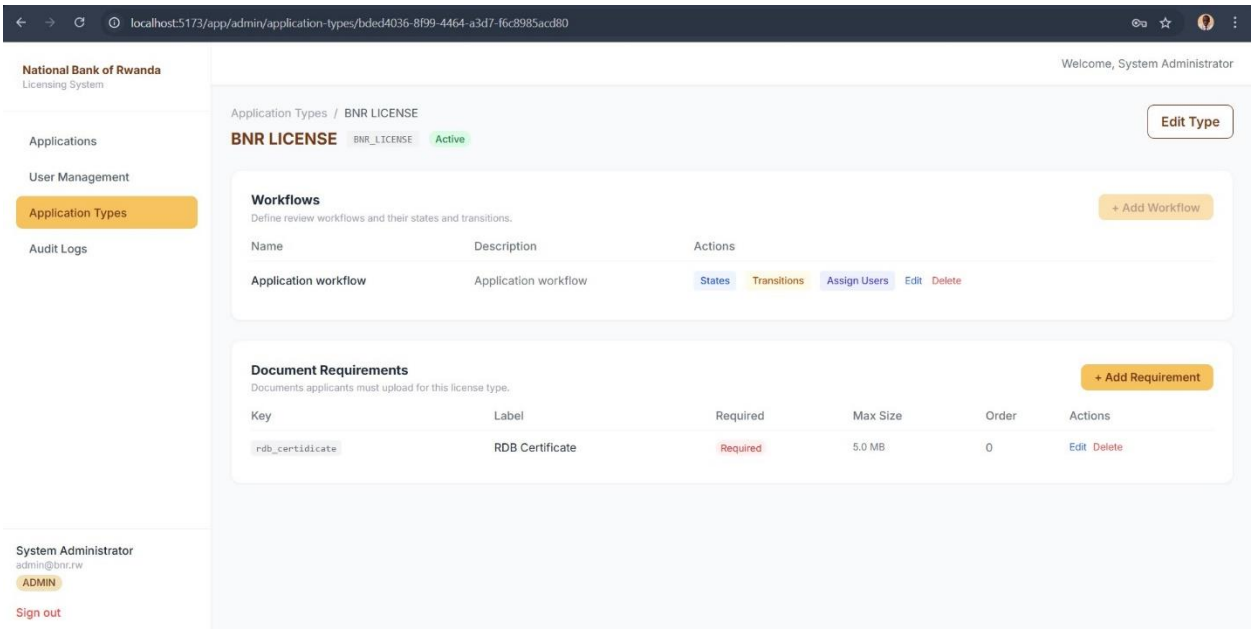
Click Create to save the new application type. Click Cancel to discard.

Managing an Application Type

Click the Manage link next to an application type to open its detail page. This page shows the full configuration for that type, including:

- Type name, code, and status badge (Active)
- Workflows section with the list of associated review workflows
- Document Requirements section listing required upload documents

From this page you can access buttons to: Edit Type, Add Workflow, manage States, Transitions, Assign Users, and Add Requirement.



Workflows

A Workflow defines the review process for a given application type. It consists of a series of States (stages) connected by Transitions (the actions that move an application from one state to the next).

Overview

Each Application Type can have one or more workflows. The workflow detail page (accessed via Manage on an Application Type) shows:

- The workflow name (e.g., Application workflow)
- A description of the workflow
- Action links: States, Transitions, Assign Users, Edit, Delete

Adding a Workflow

To add a new workflow to an application type:

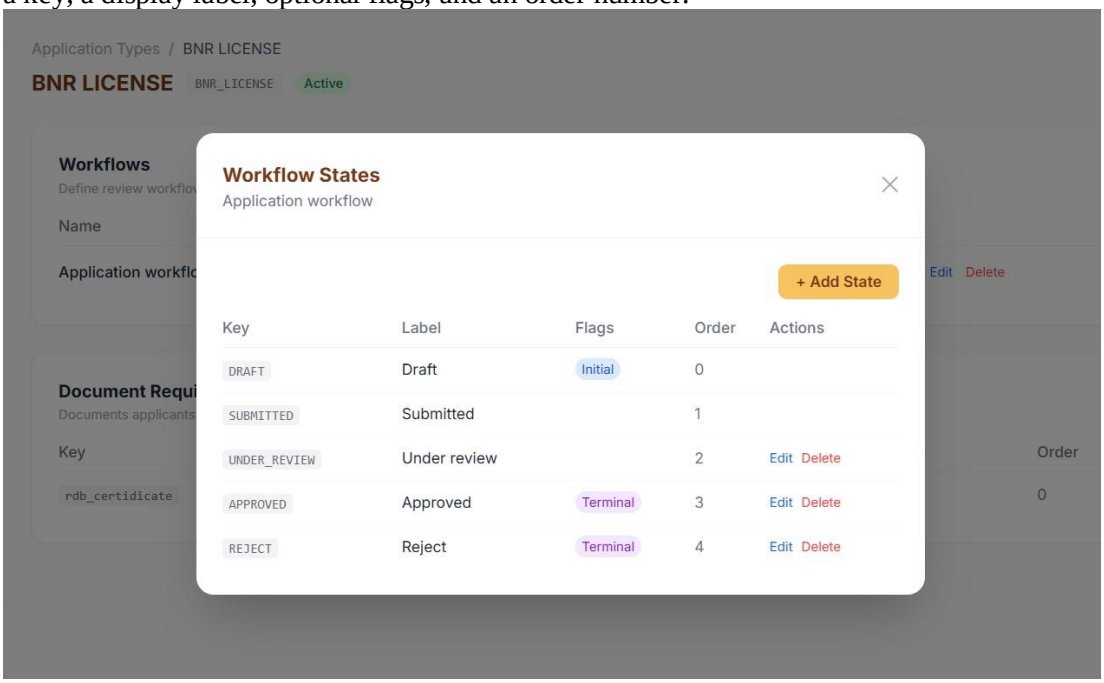
- Navigate to Application Types and click **Manage** on the desired type.

- In the Workflows section, click the **+ Add Workflow** button.
- Enter a name and optional description for the workflow.
- Click Create to save the workflow.

Once a workflow is created, you can configure its States and Transitions.

Workflow States

States represent the distinct stages an application passes through during the review process. Each state has a key, a display label, optional flags, and an order number.



Adding a State

To add a new state to a workflow, click the + Add State button in the Workflow States dialog. Fill in the following fields:

Field	Required	Description
Key	Yes	A unique uppercase identifier with underscores (e.g., PENDING_REVIEW). Used internally by the system.
Label	Yes	The user-facing display name for this state (e.g., Pending Review).
Flag	No	Mark as Initial (the default starting state when an application is created) or Terminal (no further transitions allowed from this state e.g., Approved, Rejected).

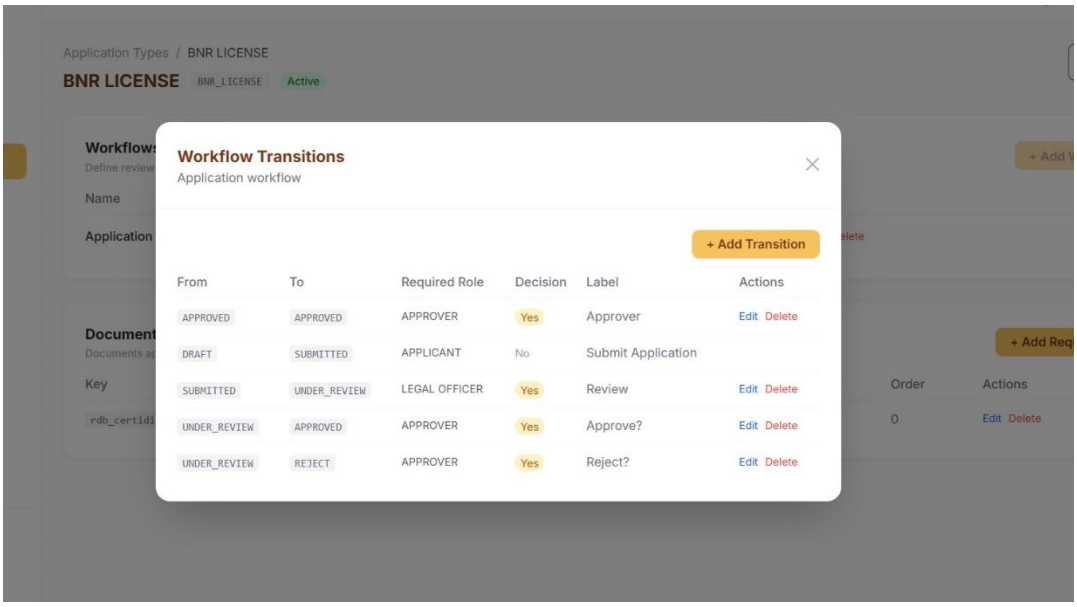
Order	Yes	A numeric value that controls the order of the state in the workflow. Lower numbers appear first.

Note: Only one state per workflow should be marked as Initial. Terminal states typically represent outcomes such as Approved or Rejected.

Click Save (or Create) to add the state. It will appear immediately in the states table.

Workflow Transitions

Transitions define the allowed movements between workflow states. Each transition specifies the origin state, the destination state, which role can trigger it, whether a decision is required, and a display label.



Default transitions configured for the BNR LICENSE Application workflow:

From	To	Required Role	Decision	Label
APPROVED	APPROVED	APPROVER	Yes	Approver
DRAFT	SUBMITTED	APPLICANT	No	Submit Application
SUBMITTED	UNDER_REVIEW	LEGAL_OFFICER	Yes	Review
UNDER_REVIEW	APPROVED	APPROVER	Yes	Approve?
UNDER_REVIEW	REJECT	APPROVER	Yes	Reject?

Adding a Transition

To add a new transition, click the + Add Transition button in the Workflow Transitions dialog. Fill in the following fields:

Field	Required	Description
From State	Yes	Select the starting state from the dropdown list of available workflow states.
To State	Yes	Select the destination state the application will move to.
Required Role	Yes	Select the staff role that is authorized to trigger this transition.
Decision	No	Toggle whether this transition requires a formal decision (approval/rejection reason). Set to Yes for review or approval actions.
Label	Yes	A short, descriptive action name shown to users (e.g., Submit Application, Approve, Reject).

Click Save (or Create) to add the transition. It will appear in the transitions table immediately.

Assigning Users to Workflows

After configuring the workflow states and transitions, you can assign specific staff members to perform actions within the workflow based on their roles.

How to Assign Users

- Navigate to **Application Types** and click **Manage** on the desired application type.
- In the Workflows section, locate the workflow and click the **Assign Users** link.
- A dialog will open listing the available roles in the workflow (e.g., APPROVER, LEGAL_OFFICER, INTAKE_OFFICER).
- For each role, select the staff member to assign from a dropdown or search field.
- Click Save to confirm the assignments.

Notes on Role Assignment

- Only users with the STAFF role (created via User Management) can be assigned to workflow roles.
- A staff user can be assigned to multiple roles across different workflows.
- Role assignments can also be made when creating a user via the + Add Role button in the Create Staff User form.

Document Requirements

Document Requirements define which files applicants must upload when submitting an application of a given type. Each requirement specifies the file key, label, allowed file types, maximum size, and whether it is mandatory.

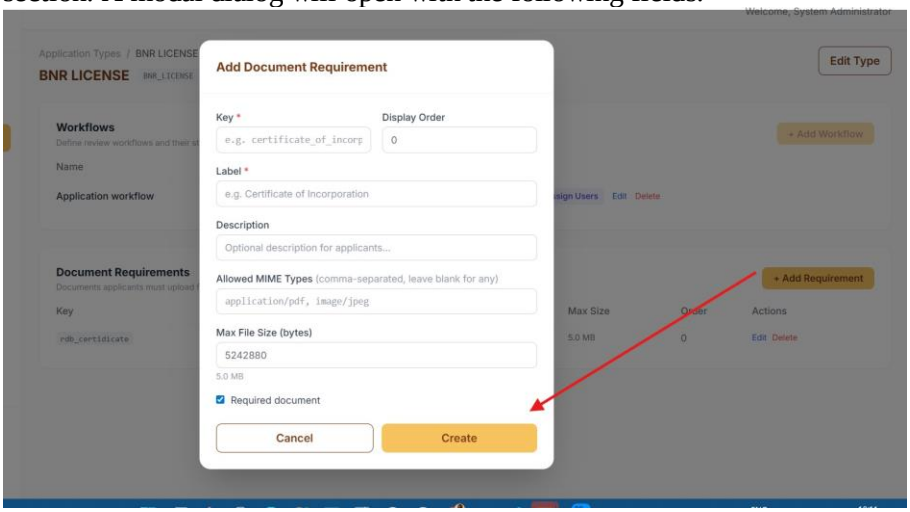
Viewing Document Requirements

On the Application Type detail page (accessed via Manage), the Document Requirements section lists all configured requirements for that type. The table columns are:

Column	Description
Key	A unique system identifier for the document (e.g., rdb_certificate).
Label	The human-readable name shown to applicants (e.g., RDB Certificate).
Required	Whether the document is mandatory for submission (Required badge shown in red).
Max Size	The maximum allowed file size for the upload (e.g., 5.0 MB).
Order	The display order of the requirement in the upload form.
Actions	Edit and Delete links.

Adding a Document Requirement

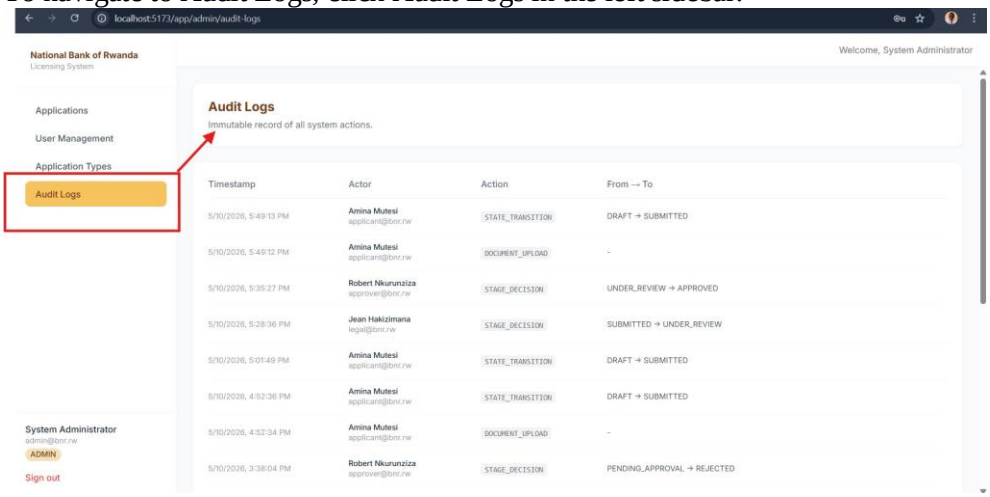
To add a new document requirement, click the + Add Requirement button in the Document Requirements section. A modal dialog will open with the following fields:



Click Create to save the requirement. Click Cancel to discard.

> **Note:** Ensure the Key is unique within the application type. Duplicate keys will cause a validation error.

Audit Logs

The Audit Logs section provides an immutable record of all actions performed in the system. This is used for compliance, monitoring, and troubleshooting purposes.


To navigate to Audit Logs, click Audit Logs in the left sidebar.
